***Please Note: It is highly advised that the practice complete all Windows updates on the server/workstation where the ePetHealth dashboard will be installed. This will expedite the dashboard installation process.**

Introduction

The ePetHealth dashboard's function is to automate the extraction of practice data. The dashboard allows the user to explicitly set what data they want to include in their extraction based on the categories in their database and then set a recurring schedule to extract this data.

Installation & Setup

Click the following link to access the ePetHealth Dashboard installation file:

[Setup for ePetHealth](#)

- Run the ePetHealth Setup.exe
- Select AVImark SQL from the PMS Menu
 - All versions of AVImark SQL are supported
- Default Installation Directories:
 - For 32-bit machines, C:\Program Files\ePetHealth
 - For 64-bit machines, C:\Program Files (x86)\ePetHealth

Authentication|Configuration

When prompted, enter the ID and License Key created by Patterson Veterinary to activate the ePetHealth Dashboard in the Authentication Settings area of the Options tab. Additional question mark balloons are located to the right of each header. Simply hover over the question mark to see more details about each section. For AVImark SQL, the Authentication Settings will always require input. Connection Settings allows for entry of path- or server-based settings.

General Settings

- **Enable Record Count Feature:** Will show the record counts of types of exclusions on each Selection.
 - The feature is enabled by default
 - Will save computer memory usage when disabled
- **Use Low Memory Settings:** Will allow the ePetHealth Dashboard to use lower memory settings.
 - The feature is disabled by default
 - Will save computer memory usage when enabled
 - Recommended for lower quality / older hardware

Authentication Settings

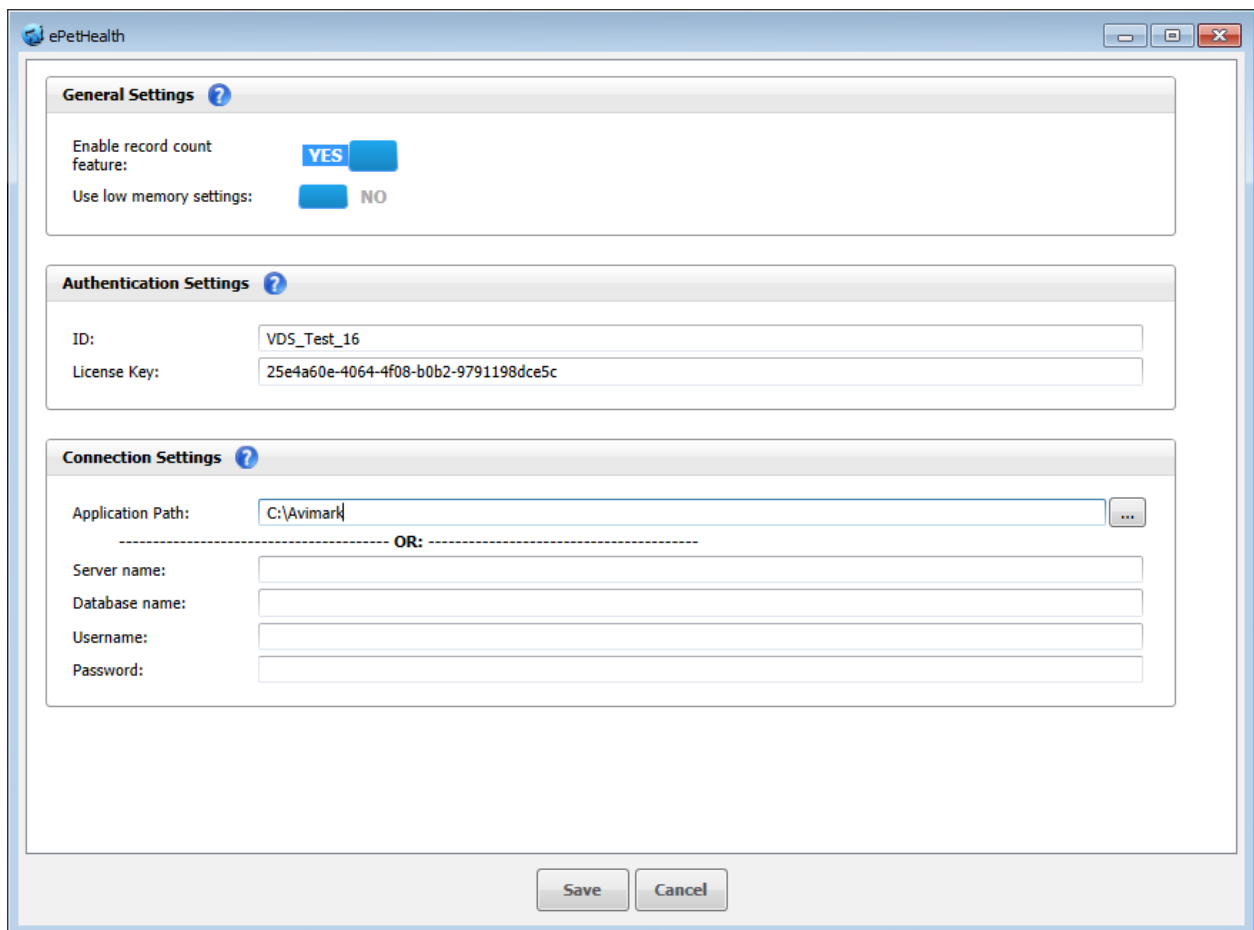

- **ID:** Created by Patterson Veterinary and is required to activate the ePetHealth Dashboard.
- **License Key:** Created by Patterson Veterinary and is required to activate the ePetHealth Dashboard.

Connection Settings

- **Application Path:** Enter the installation path of the Practice Management Software.

* By default, the dashboard will use Windows authentication; the following settings are not typically needed.

- **Server name:** Enter the server / workstation name as it appears on the computer that the ePetHealth Dashboard is being installed on.
- **Database name:** Enter the name of the database that the ePetHealth dashboard will extract data from.
- **Username:** The Username required to log into Microsoft SQL Server.
- **Password:** The Password required to log into Microsoft SQL Server.

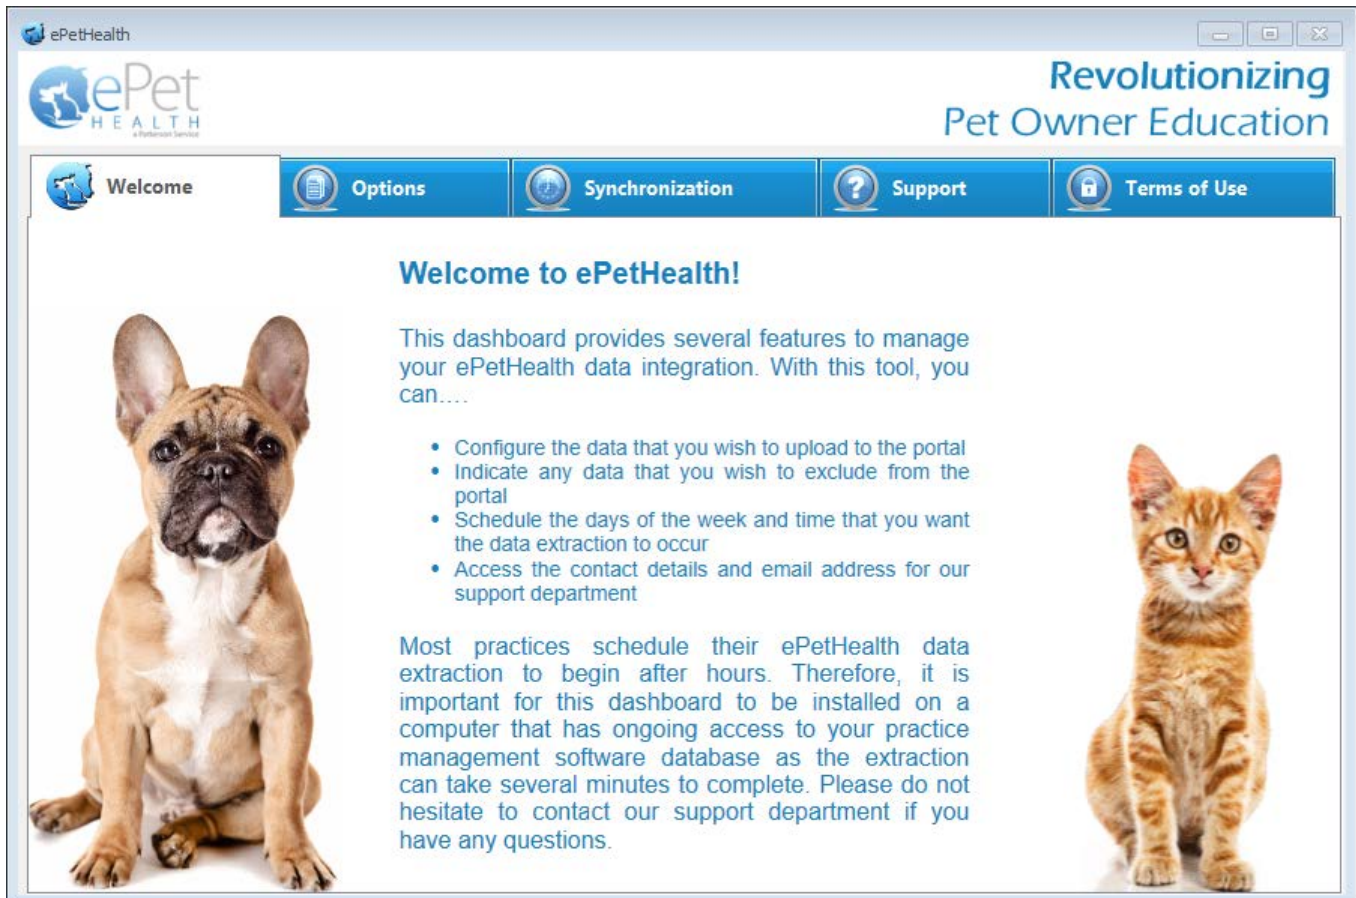

The screenshot shows the ePetHealth settings window with three sections: General Settings, Authentication Settings, and Connection Settings. The General Settings section has two toggle switches: 'Enable record count feature' set to YES and 'Use low memory settings' set to NO. The Authentication Settings section has two text boxes: 'ID' with the value 'VDS_Test_16' and 'License Key' with the value '25e4a60e-4064-4f08-b0b2-9791198dce5c'. The Connection Settings section has an 'Application Path' text box with 'C:\Avimark' and a browse button. Below it is an 'OR:' separator, followed by four text boxes for 'Server name', 'Database name', 'Username', and 'Password', all of which are currently empty. At the bottom of the window are 'Save' and 'Cancel' buttons.

Functionality

Welcome

The Welcome tab displays several features that the ePetHealth dashboard offers and provides pertinent information to the end-user. This tab will be updated periodically as features change.

The screenshot shows the ePetHealth dashboard interface. At the top left is the ePetHealth logo. To the right, the text reads "Revolutionizing Pet Owner Education". Below this is a navigation bar with four tabs: "Welcome" (selected), "Options", "Synchronization", and "Support". The "Terms of Use" tab is also visible. The main content area features a "Welcome to ePetHealth!" heading. To the left is a photo of a French Bulldog, and to the right is a photo of an orange tabby kitten. The central text explains the dashboard's purpose and lists four key features: configuring upload data, excluding data, scheduling data extraction, and accessing support contact information. A note at the bottom states that data extraction typically occurs after hours and may take several minutes to complete, advising users to contact support if they have questions.

Revolutionizing
Pet Owner Education

Welcome Options Synchronization Support Terms of Use

Welcome to ePetHealth!

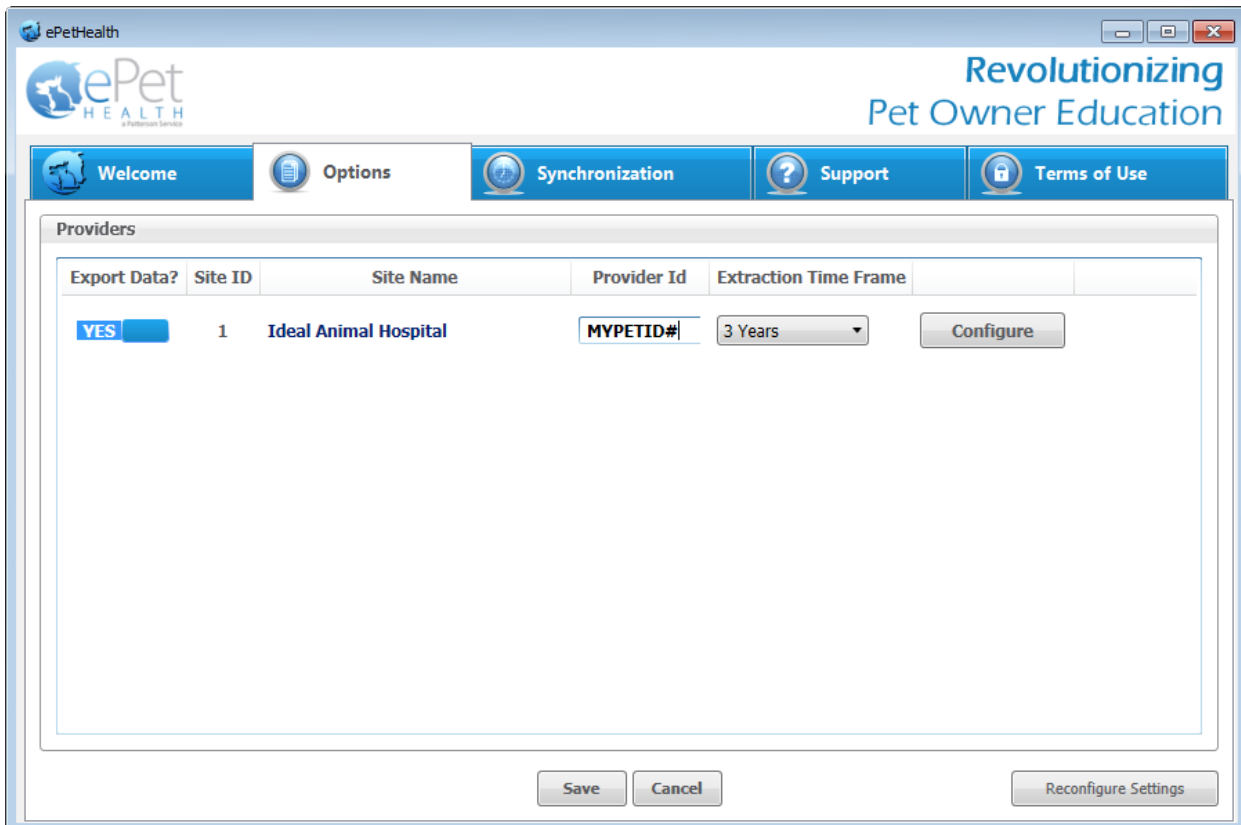

This dashboard provides several features to manage your ePetHealth data integration. With this tool, you can....

- Configure the data that you wish to upload to the portal
- Indicate any data that you wish to exclude from the portal
- Schedule the days of the week and time that you want the data extraction to occur
- Access the contact details and email address for our support department

Most practices schedule their ePetHealth data extraction to begin after hours. Therefore, it is important for this dashboard to be installed on a computer that has ongoing access to your practice management software database as the extraction can take several minutes to complete. Please do not hesitate to contact our support department if you have any questions.

Options

- The Options tab gives the practice the option to include or exclude sites in the synchronization. The practice's Provider ID and VetSource ID (if subscribed) are also entered in this tab.
- All selected sites will be present in separate extracted files. The content in the corresponding *Configure* option defines the practice data to be included.
- All locations are identified by a site ID (ex. ABC). Each file contains data for patients associated with the specified site code(s) **or** that have an appointment, reminder, or transaction associated with the specified site code(s) within the extraction date range.
- Sliding the Export Data? option to *NO* for site IDs will filter out all patients associated with that site ID and exclude them from the sync.
- Extraction Time Frames can be set to pull data from the past six months, one year, two years or three years.

The screenshot shows the 'Options' tab in the ePetHealth application. The main content area is titled 'Providers' and contains a table with the following columns: 'Export Data?', 'Site ID', 'Site Name', 'Provider Id', and 'Extraction Time Frame'. There is one row of data for 'Ideal Animal Hospital' with Site ID '1'. The 'Export Data?' column has a 'YES' button. The 'Provider Id' column contains the text 'MYPETID#'. The 'Extraction Time Frame' column has a dropdown menu set to '3 Years' and a 'Configure' button. At the bottom of the window, there are 'Save', 'Cancel', and 'Reconfigure Settings' buttons.

Export Data?	Site ID	Site Name	Provider Id	Extraction Time Frame
YES	1	Ideal Animal Hospital	MYPETID#	3 Years

Configure

Selections

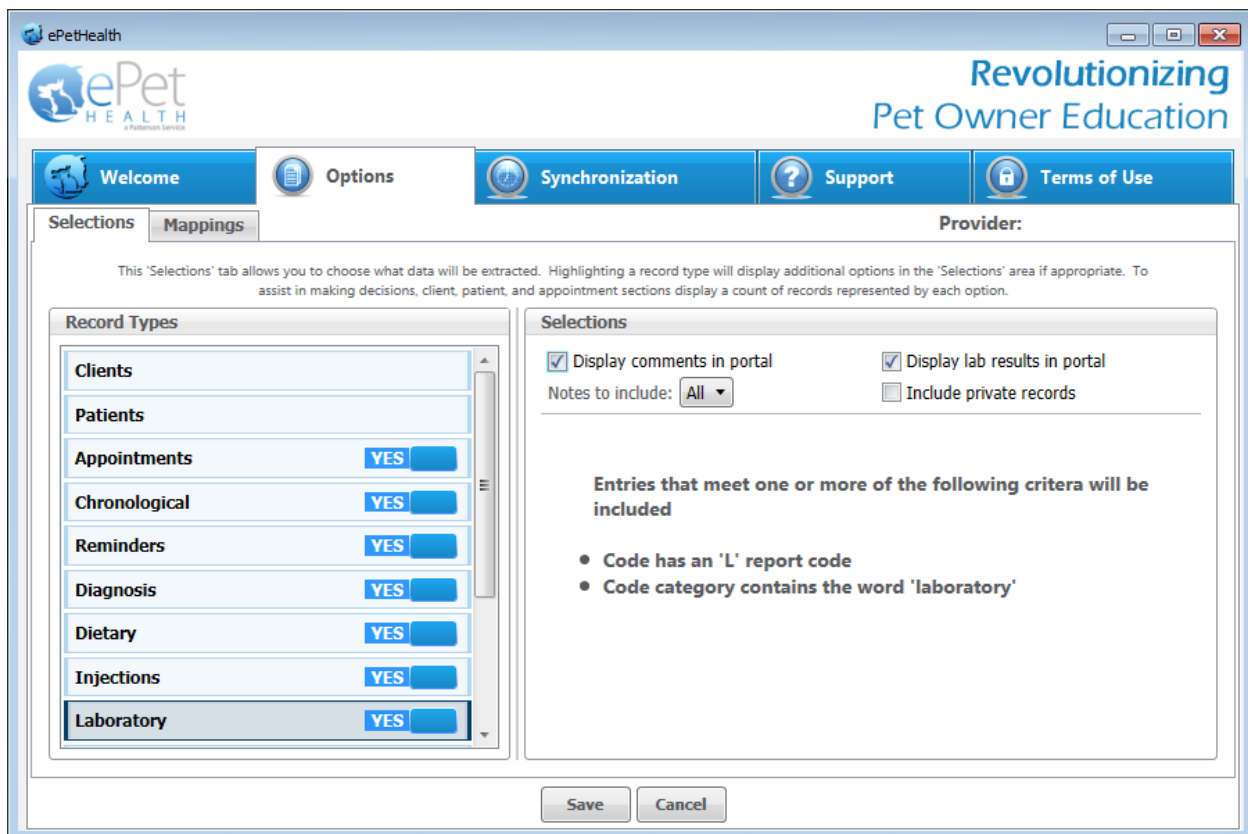

Click on the Configure button from the Options tab to configure the data that will be extracted from the practice database.

The available Synchronized Record Types are Client Types, Patient Species, Appointments, Chronological, Reminders, Boarding, Diagnosis, Dietary, Examination, Grooming, Injections, Laboratory, Lameness, Medications, Preventative, Problems, Radiology, Reproductive, Surgeries and Vaccinations.

Each Record Type can be easily customized to match the Categories of the Practice Management System. All information shown in the dashboard is pulled directly from the Practice Management System.

The 'Selections' tab allows you to choose what data will be extracted. Highlighting a Record Type will display additional options in the 'Selections' area if appropriate. To assist in making decisions, client, patient and appointment sections display a count of records represented by each option.

Please note: A variety of Pet Owner Communications can be affected by the Selections made. Notification Alerts can be found on Selections that can hinder such things as Appointment Confirmations, Satisfaction Surveys and Health Reminders.

Client Selections

- Classification codes / Client types can be included or excluded on a per site basis, by first expanding each Selection area then toggling the 'yes/no' indicator to exclude (yes) or include (no).
- Clients may be excluded by entering a specific client ID or selecting from the listed client types.
 - When adding multiple client IDs, simply add a comma between each client ID.
 - If a client ID or type is excluded, any clients with that ID or type will not be included in the synchronization, and will not be able to log into their ePetHealth Client Portal.
- All clients will be included in the synchronization if the client filtering options are left to the default ('no' to include) in a new installation.

Appointment Selections

- Appointments can be included or excluded based on the following criteria on a per site basis. These are all included by default in a new installation.
 - a specific provider/resource
 - appointment types
 - appointment statuses
 - appointment tracking statuses

AVImark SQL does not support appointment reasons.

- All appointments with excluded criteria will not be included in the synchronization and will not be viewable in the ePetHealth Client Portal.
- All appointments will be included in the synchronization if the appointment filtering options are left to the default ('no' to include) in a new installation.
- In the Selections Table, comments (notes) may be selected to display in the Client Portal by checking the box at the top of the table. This is deselected (excluded) by default.
- **Notes to include/All:** When the 'Display comments in portal' option is selected, notes in AVImark SQL, whether they are marked as Public or not, will displayed on the portal.
- **Notes to include/Public Only:** When the 'Display comments in portal' option is selected, notes in AVImark SQL marked as Public will displayed on the portal.
- **Include private records:** When the 'Include private records' checkbox is selected, records marked as *private* in AVImark SQL will be displayed on the portal.
- If the Appointment Selection is set to No, confirmation emails for appointments will not be sent to pet owners. A notification alert such as the one shown below will appear.

Mappings

- Mappings allow the dashboard to map fields from the Practice Management System to the ePetHealth 'mapped value', which will be shown in the Client Portal.

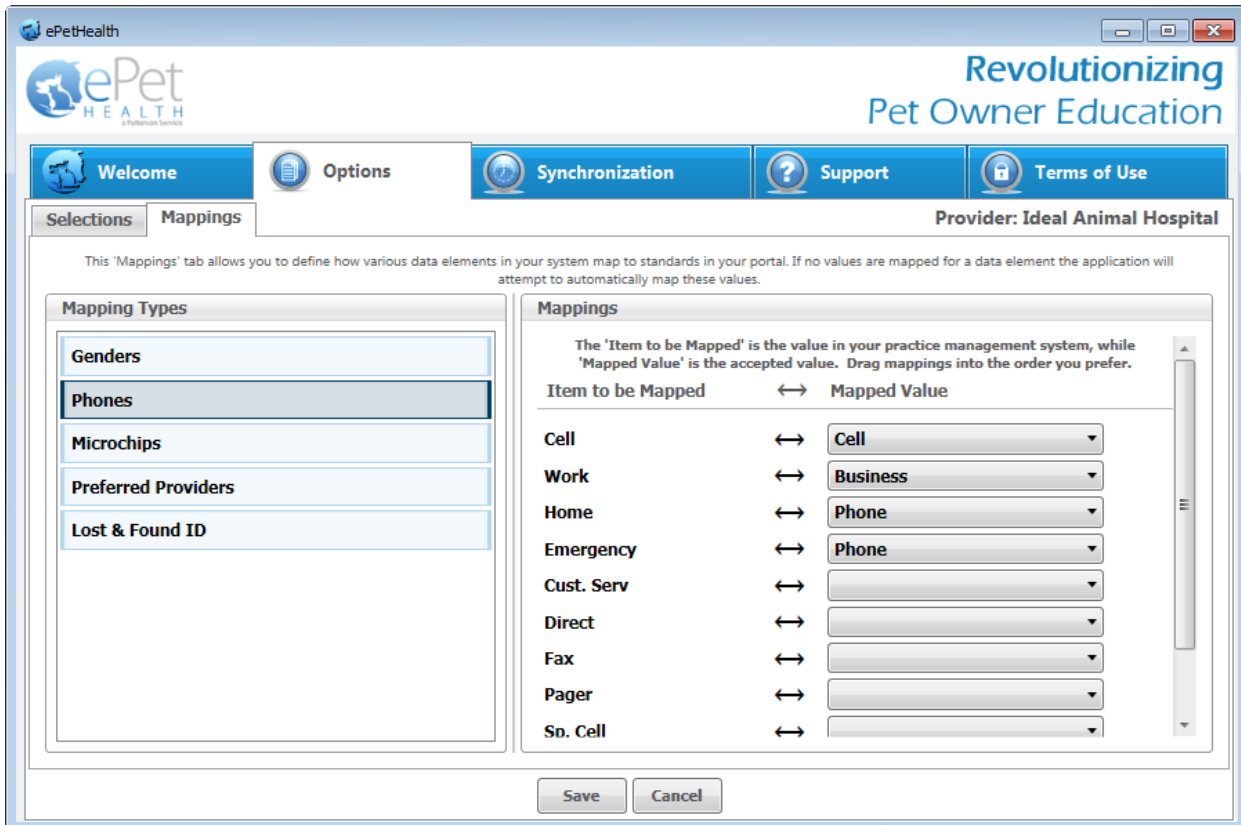

- Genders:
 - The 'Item to be Mapped' is the value in the Practice Management System.
 - The 'Mapped Value' is the accepted value.
 - Multiple genders can be mapped to the same Mapped Value.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - For example, the practice would need to designate that the M-Male gender (item to be mapped) in their Practice Management System is the same as Male in the Client Portal (mapped value).

This 'Mappings' tab allows you to define how various data elements in your system map to standards in your portal. If no values are mapped for a data element the application will attempt to automatically map these values.

Item to be Mapped	↔	Mapped Value
-	↔	
? - ?	↔	
C - C	↔	
F - F	↔	Female
FI - FI	↔	
FS - FS	↔	Spayed Female
G - G	↔	Gelding
M - M	↔	Male
MN - MN	↔	Neutered Male

- Phones:
 - The 'Item to be Mapped' is the value in the Practice Management System.
 - The 'Mapped Value' is the accepted value.
 - Multiple phones can be mapped to the same Mapped Value, but only the first phone displayed in the list will be shown for that particular client. For example, Phone and Work (Item to be Mapped) are both mapped to Phone (Mapped Value), but only Phone (Item to be Mapped) will show. Work (Item to be Mapped) will not show.
 - Phone types mapped to the same Mapped Value can be dragged and dropped in the order of priority for the extraction. In the example below, Home and Emergency are both mapped to Phone. Home takes priority over Emergency, so if Client A has both Home and Emergency in the Practice Management System, Home will be mapped to Phone in the extraction.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - For example, the practice would need to designate that the Work (Item to be Mapped) in their Practice Management System is the same as Business in the Client Portal (Mapped Value).

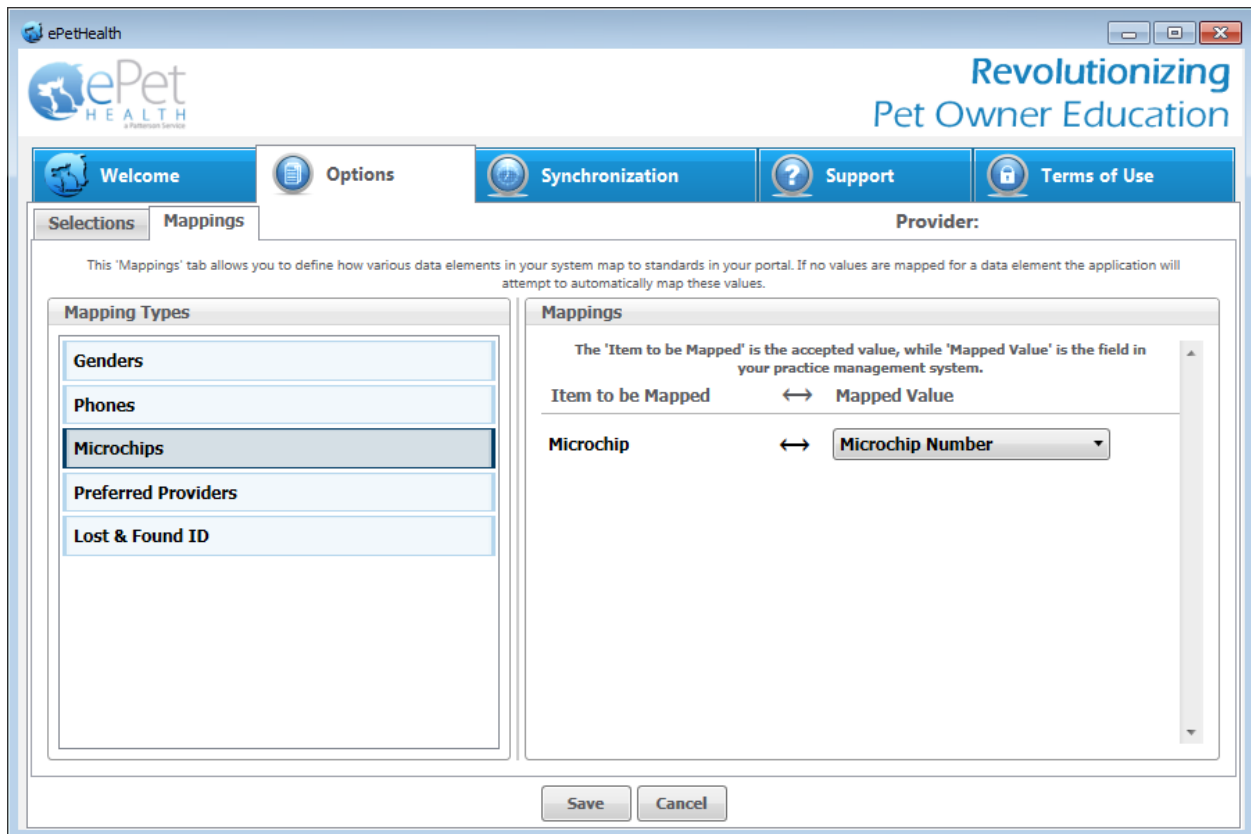

The screenshot shows the 'Mappings' configuration window in the ePetHealth application. The window title is 'ePetHealth' and the provider is 'Ideal Animal Hospital'. The 'Mappings' tab is active, showing a table where 'Item to be Mapped' values are mapped to 'Mapped Value' standards. The 'Phones' category is selected in the 'Mapping Types' sidebar. The table shows the following mappings:

Item to be Mapped	Mapped Value
Cell	Cell
Work	Business
Home	Phone
Emergency	Phone
Cust. Serv	
Direct	
Fax	
Pager	
Sn. Cell	

Buttons for 'Save' and 'Cancel' are located at the bottom of the window.

- Microchips:
 - The 'Item to be Mapped' is the accepted value.
 - The 'Mapped Value' is the value in the Practice Management System.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - For example, the practice would need to designate that the Microchip (Item to be Mapped) that will display in the Client Portal is the same as Microchip Number (Mapped Value) in their Practice Management System.

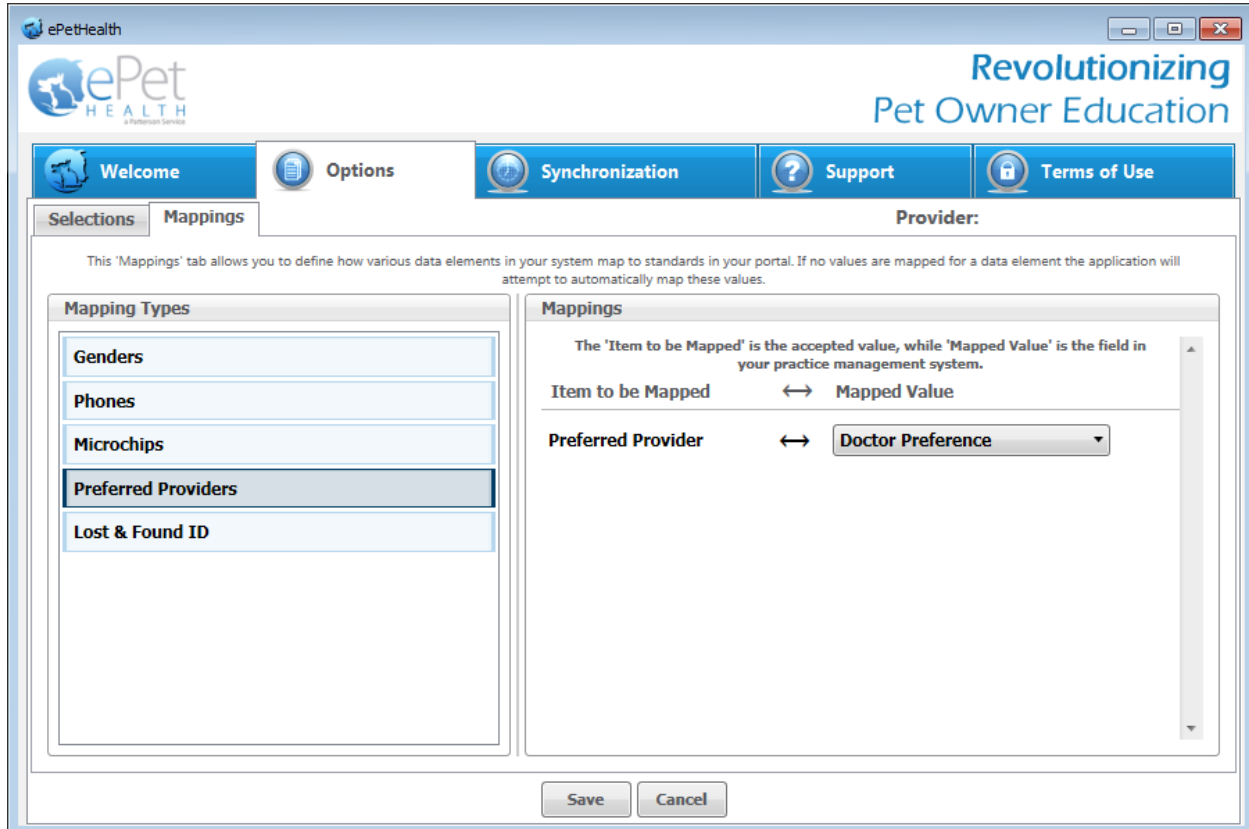

The screenshot shows the 'ePetHealth' application window with the 'Mappings' tab selected. The window title is 'ePetHealth' and the header includes the ePetHealth logo and the slogan 'Revolutionizing Pet Owner Education'. The navigation bar contains 'Welcome', 'Options', 'Synchronization', 'Support', and 'Terms of Use'. The 'Mappings' tab is active, and the 'Provider:' field is empty. A descriptive text states: 'This 'Mappings' tab allows you to define how various data elements in your system map to standards in your portal. If no values are mapped for a data element the application will attempt to automatically map these values.'

On the left, the 'Mapping Types' list includes: Genders, Phones, **Microchips** (selected), Preferred Providers, and Lost & Found ID. The main 'Mappings' area contains the following table:

Item to be Mapped	↔	Mapped Value
Microchip	↔	Microchip Number

At the bottom of the window are 'Save' and 'Cancel' buttons.

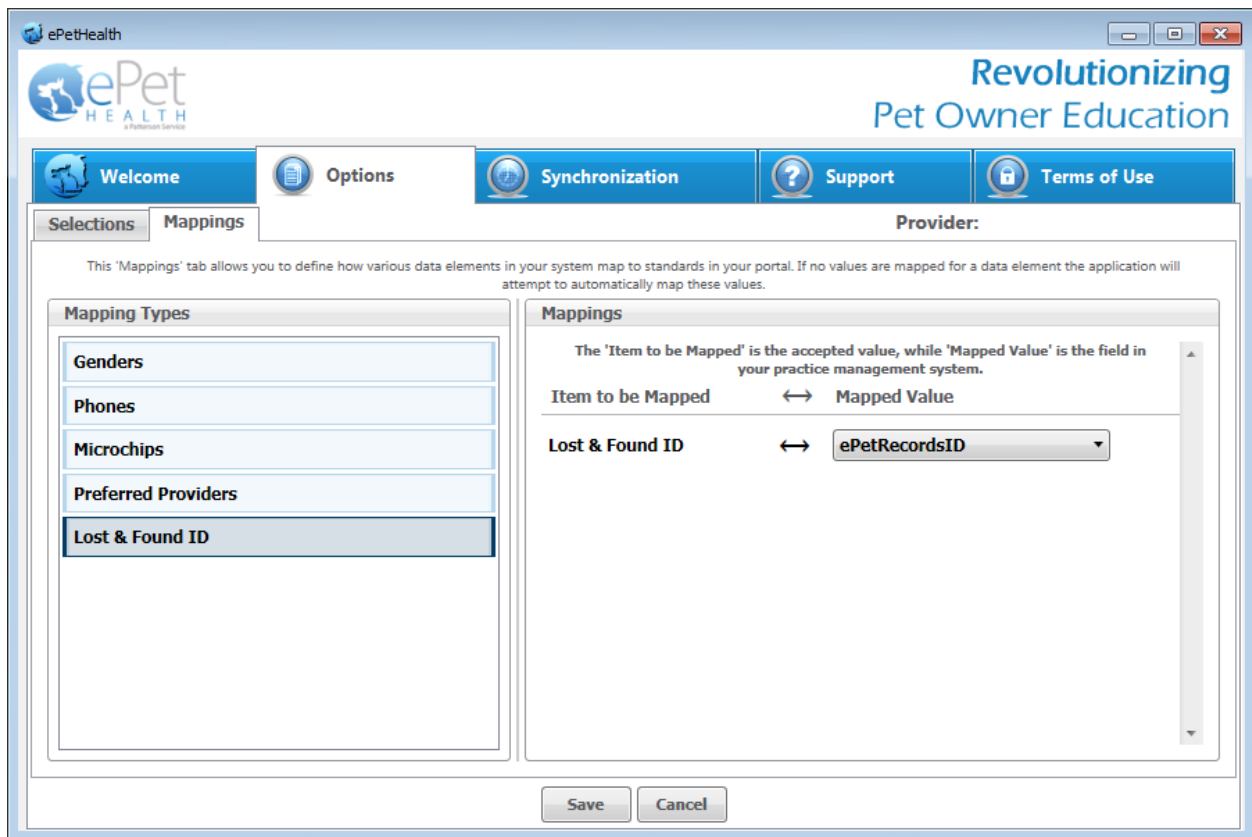

- Preferred Provider:
 - The 'Item to be Mapped' is the accepted value.
 - The 'Mapped Value' is the value in the Practice Management System.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - This mapping allows the dashboard to pull the correct Practice Management field for the Preferred Provider of the client in the ePetHealth Client Portal.
 - For example, the practice would need to designate that the Preferred Provider (Item to be Mapped) that will display in the Client Portal is the same as Doctor Preference (Mapped Value) in their Practice Management System.

The screenshot shows the ePetHealth application window with the 'Mappings' tab selected. The window title is 'ePetHealth' and the header includes the ePetHealth logo and the slogan 'Revolutionizing Pet Owner Education'. The navigation bar contains 'Welcome', 'Options', 'Synchronization', 'Support', and 'Terms of Use'. The 'Mappings' tab is active, and the 'Provider:' dropdown is set to 'Provider:'. Below the header, a descriptive text states: 'This 'Mappings' tab allows you to define how various data elements in your system map to standards in your portal. If no values are mapped for a data element the application will attempt to automatically map these values.' On the left, a 'Mapping Types' list includes 'Genders', 'Phones', 'Microchips', 'Preferred Providers' (highlighted), and 'Lost & Found ID'. The main 'Mappings' area contains a table with two columns: 'Item to be Mapped' and 'Mapped Value'. The first row shows 'Preferred Provider' mapped to 'Doctor Preference'. Below the table are 'Save' and 'Cancel' buttons.

Item to be Mapped	Mapped Value
Preferred Provider	Doctor Preference

- Lost & Found IDs:
 - The 'Item to be Mapped' is the accepted value.
 - The 'Mapped Value' is the value in the Practice Management System.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - This mapping allows the dashboard to pull the correct Practice Management System field for the Lost & Found ID field in the ePetHealth Client Portal. This field is designed to work with ePetHealth's Lost & Found ID tags, which are searchable through our website: <http://www.epethealth.com>

The screenshot shows the 'Mappings' configuration window in the ePetHealth application. The window title is 'ePetHealth' and it features the ePetHealth logo and the tagline 'Revolutionizing Pet Owner Education'. The navigation bar includes 'Welcome', 'Options', 'Synchronization', 'Support', and 'Terms of Use'. The 'Mappings' tab is active, showing a list of 'Mapping Types' on the left and a 'Mappings' table on the right. The 'Lost & Found ID' mapping type is selected, and its corresponding 'Mapped Value' is set to 'ePetRecordsID'. The 'Save' and 'Cancel' buttons are visible at the bottom.

Synchronization

Synchronizations will pull data from the past six months, one year, two years or three years, depending on what option is selected in the Extraction Time Frame menu under the Options tab.

NOTICE: The Server must remain **turned ON** during the selected days/time to allow your practice's data to upload to ePetHealth. If the dashboard is installed on a workstation, both the workstation and the server computer must remain on.

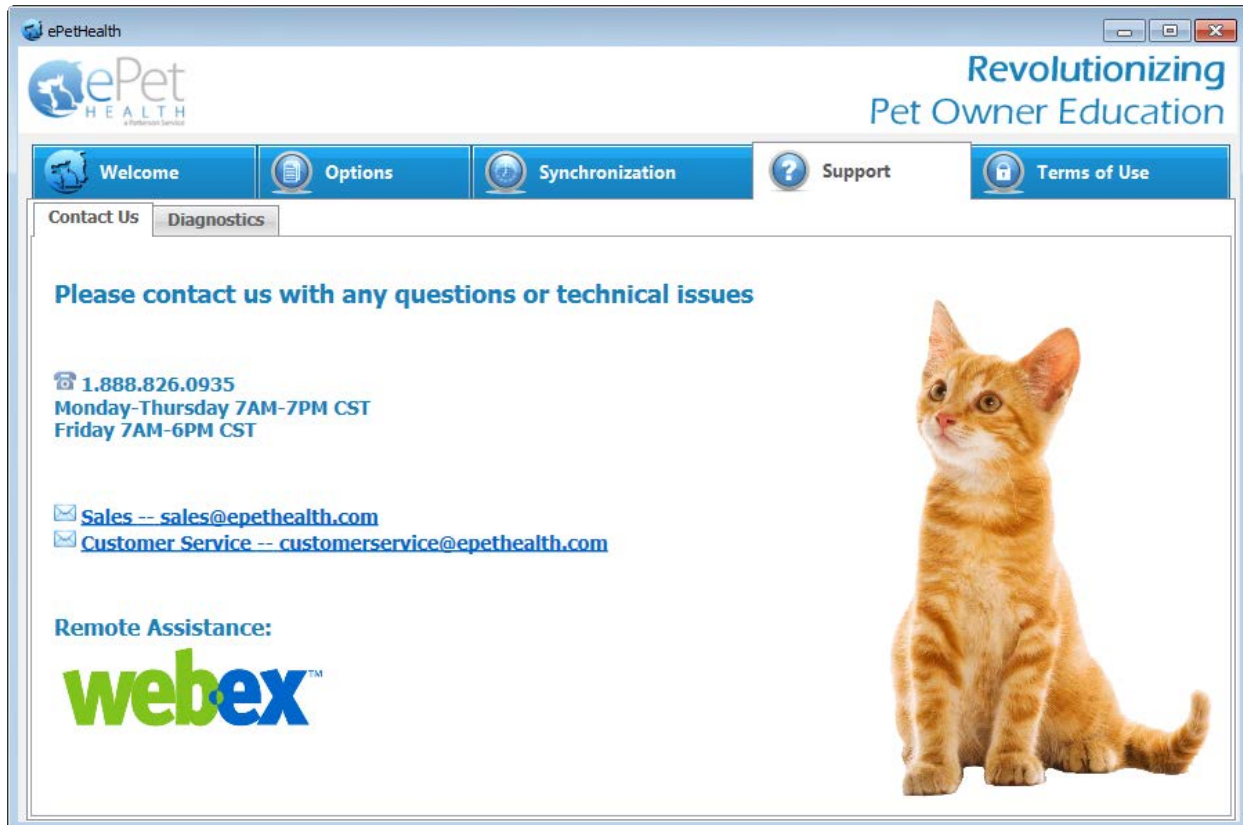

ePetHealth recommends that the synchronization schedule be set to sync immediately after the practice closes each day, on days that the practice is open.

It is also possible to run a manual synchronization from this screen.

The screenshot shows the ePetHealth application window with the 'Synchronization' tab selected. The interface includes a navigation bar with 'Welcome', 'Options', 'Synchronization', 'Support', and 'Terms of Use'. The main content area is titled 'Synchronization Schedule' and contains the following text: 'Use this tab to define when you would like your data to be synchronized with ePetHealth. Current selections will synchronize data each weekday at 9:00 PM.' Below this text is a row of days: 'Monday', 'Tuesday', 'Wednesday', 'Thursday', 'Friday', 'Saturday', and 'Sunday'. Underneath the days is a time selection interface showing '9 : 00' with 'AM' and 'PM' options. At the bottom of the 'Synchronization Schedule' section are 'Save' and 'Cancel' buttons. Below this section is a 'Manual Synchronization' section with a 'Synchronize Now' button.

Support | Contact Us

Support | Diagnostics

Service status:

- Displays the state of the service that calls the extraction
- Statuses include: Starting, Running, Paused, Stopping, Stopped, Error, Not Installed

Extraction status:

- Displays the current state of the extraction
