***Please Note: It is highly advised that the practice complete all Windows updates on the server/workstation where the ePetHealth dashboard will be installed. This will expedite the dashboard installation process.**

Introduction

The ePetHealth dashboard's function is to automate the extraction of practice data. The dashboard allows the user to explicitly set what data they want to include in their extraction based on the categories in their database and then set a recurring schedule to extract this data.

Installation & Setup

Click the following link to access the ePetHealth Dashboard installation file:

[Setup for ePetHealth](#)

- Run the ePetHealth Setup.exe
- Select AVImark from the PMS Menu
 - AVImark is supported from version 128 and above
- Default Installation Directories:
 - For 32-bit machines, C:\Program Files\ePetHealth
 - For 64-bit machines, C:\Program Files (x86)\ePetHealth

Authentication | Configuration

When prompted, enter the ID and License Key created by Patterson Veterinary to activate the ePetHealth Dashboard in the Authentication Settings area of the Options tab. Additional question mark balloons are located to the right of each header. Simply hover over the question mark to see more details about each section. For AVImark, the Authentication Settings will always require input. Connection Settings allows for entry of path- or server-based settings.

General Settings

- **Enable Record Count Feature:** Will show the record counts of types of exclusions on each Selection.
 - The feature is enabled by default
 - Will save computer memory usage when disabled
- **Use Low Memory Settings:** Will allow the ePetHealth Dashboard to use lower memory settings.
 - The feature is disabled by default
 - Will save computer memory usage when enabled
 - Recommended for lower quality / older hardware

Authentication Settings

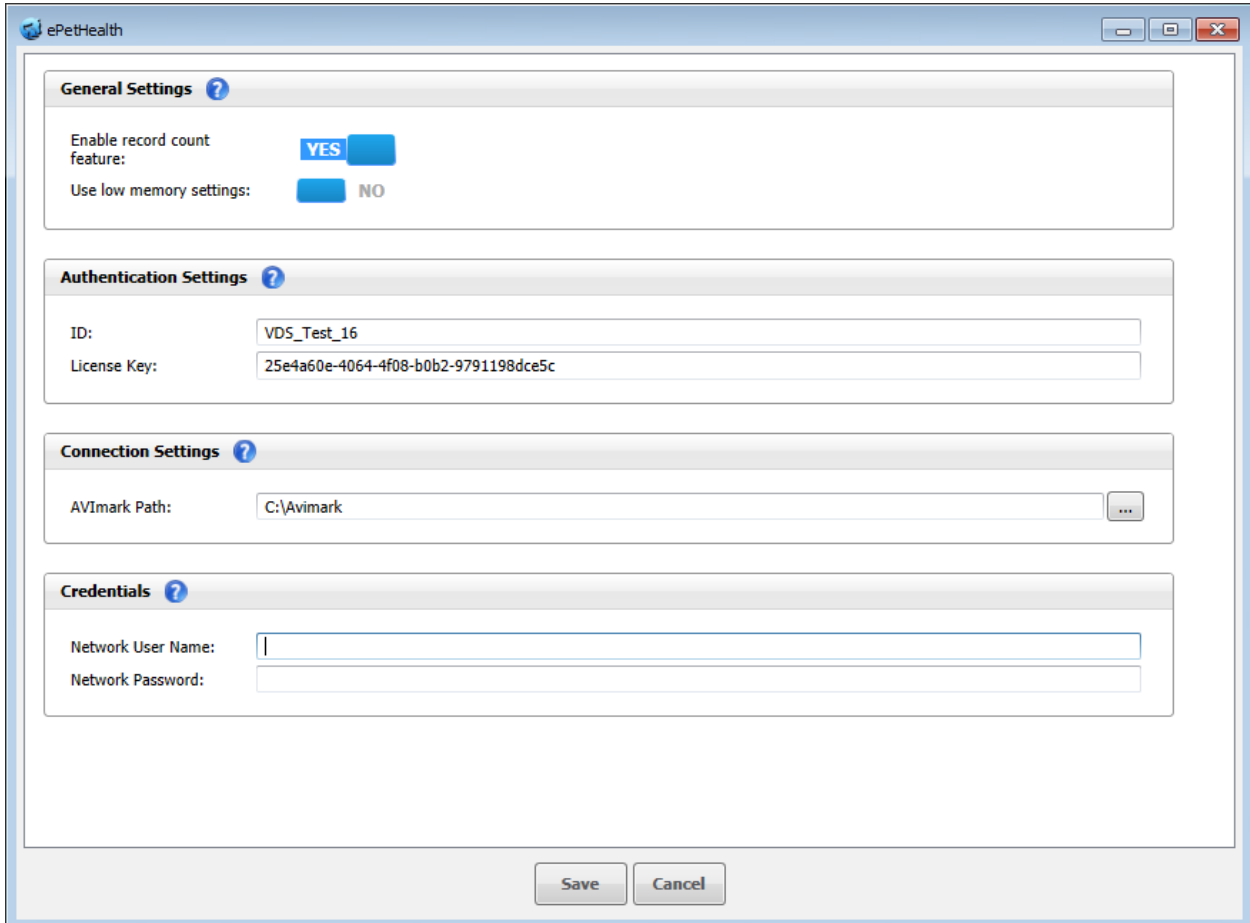

- **ID:** Created by Patterson Veterinary and is required to activate the ePetHealth Dashboard.
- **License Key:** Created by Patterson Veterinary and is required to activate the ePetHealth Dashboard.

Connection Settings

- **AVImark Path:** Enter the installation path of the Practice Management Software.

Credentials

- **Network User name:** Name of a user that has access to the database files. This is only required when the ePetHealth Dashboard is installed on a computer other than the AVImark server.
- **Network Password:** Password of the above user that has access to the database files. This is only required when the ePetHealth Dashboard is installed on a computer other than the AVImark server.

The screenshot shows the ePetHealth settings window with the following sections:

- General Settings**
 - Enable record count feature: YES
 - Use low memory settings: NO
- Authentication Settings**
 - ID: VDS_Test_16
 - License Key: 25e4a60e-4064-4f08-b0b2-9791198dce5c
- Connection Settings**
 - AVImark Path: C:\Avimark
- Credentials**
 - Network User Name:
 - Network Password:

Buttons: Save, Cancel

Functionality

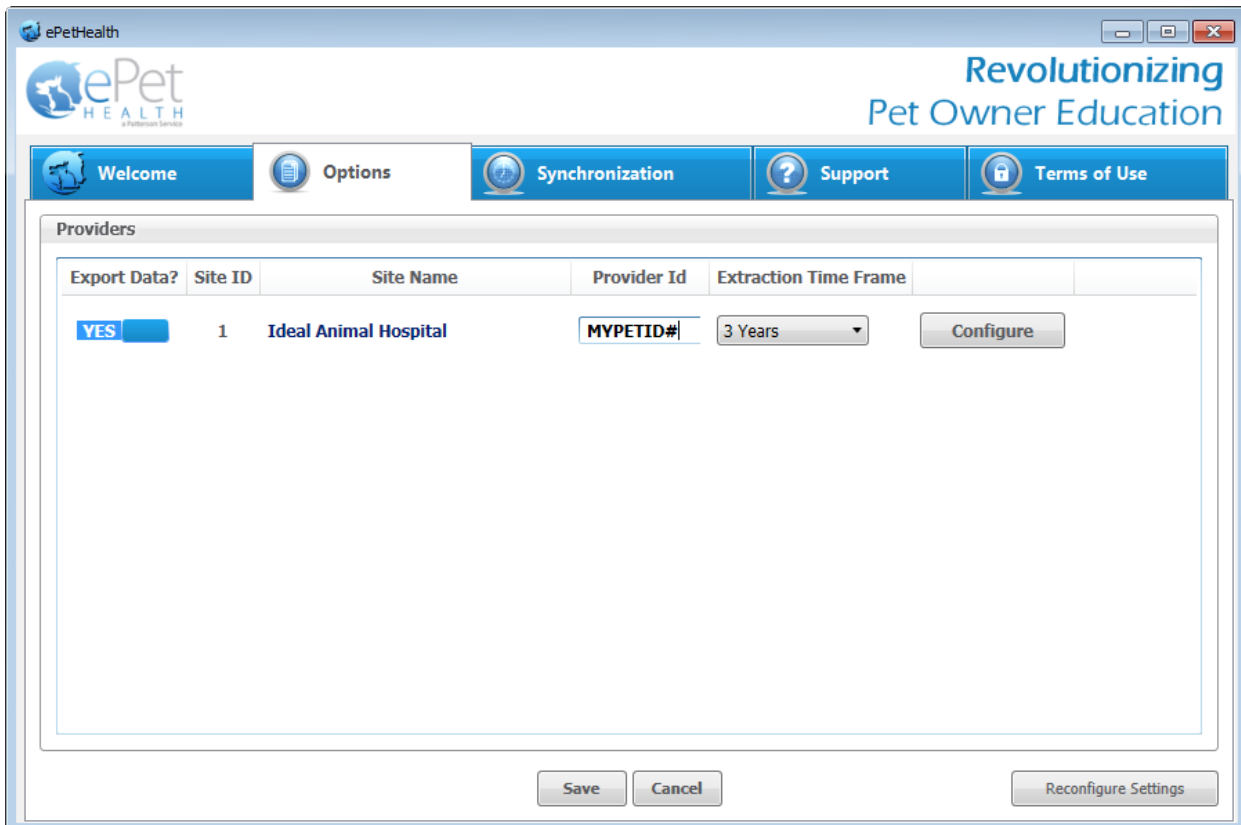

Welcome

The Welcome tab displays several features that the ePetHealth dashboard offers and provides pertinent information to the end-user. This tab will be updated periodically as features change.

Options

- The Options tab gives the practice the option to include or exclude sites in the synchronization. The practice's Provider ID and VetSource ID (if subscribed) are also entered in this tab.
- All selected sites will be present in separate extracted files. The content in the corresponding *Configure* option defines the practice data to be included.
- All locations are identified by a site ID (ex. ABC). Each file contains data for patients associated with the specified site code(s) **or** that have an appointment, reminder, or transaction associated with the specified site code(s) within the extraction date range.
- Sliding the Export Data? option to *NO* for site IDs will filter out all patients associated with that site ID and exclude them from the sync.
- Extraction Time Frames can be set to pull data from the past six months, one year, two years or three years.

The screenshot shows the 'Options' tab in the ePetHealth application. The main content area is titled 'Providers' and contains a table with the following columns: 'Export Data?', 'Site ID', 'Site Name', 'Provider Id', and 'Extraction Time Frame'. There is one row of data for 'Ideal Animal Hospital' with Site ID '1'. The 'Export Data?' column has a 'YES' button. The 'Provider Id' column contains the text 'MYPETID#'. The 'Extraction Time Frame' column has a dropdown menu set to '3 Years' and a 'Configure' button. At the bottom of the window, there are 'Save', 'Cancel', and 'Reconfigure Settings' buttons.

Export Data?	Site ID	Site Name	Provider Id	Extraction Time Frame
YES	1	Ideal Animal Hospital	MYPETID#	3 Years

Configure

Selections

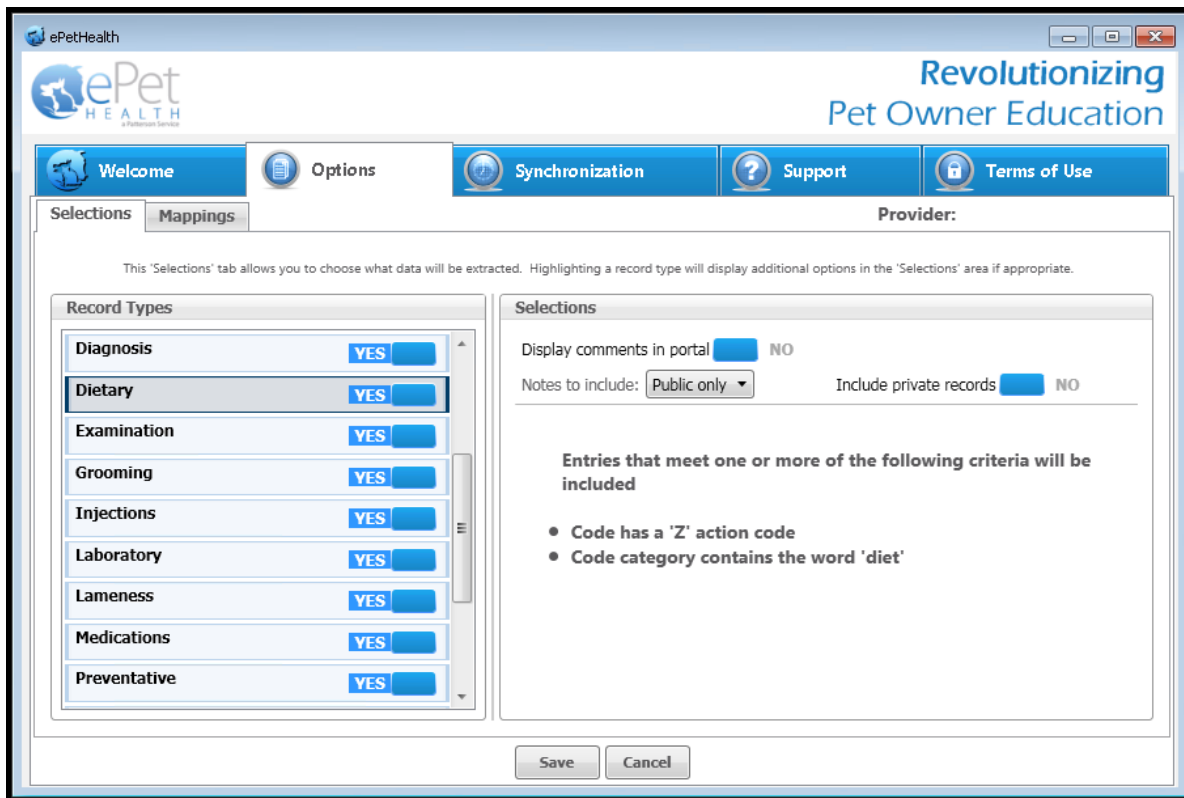

Click on the Configure button from the Options tab to configure the data that will be extracted from the practice database.

The available Synchronized Record Types are Client Types, Patient Species, Appointments, Chronological, Reminders, Boarding, Diagnosis, Dietary, Examination, Grooming, Injections, Laboratory, Lameness, Medications, Preventative, Problems, Radiology, Reproductive, Surgeries and Vaccinations.

Each Record Type can be easily customized to match the Categories of the Practice Management System. All information shown in the dashboard is pulled directly from the Practice Management System.

The 'Selections' tab allows you to choose what data will be extracted. Highlighting a Record Type will display additional options in the 'Selections' area if appropriate. To assist in making decisions, client, patient and appointment sections display a count of records represented by each option.

Please note: A variety of Pet Owner Communications can be affected by the Selections made. Notification Alerts can be found on Selections that can hinder such things as Appointment Confirmations, Satisfaction Surveys and Health Reminders.

Client Selections

- Classification codes / Client types can be included or excluded on a per site basis, by first expanding each Selection area then toggling the 'yes/no' indicator to exclude (yes) or include (no).
- Clients may be excluded by entering a specific client ID or selecting from the listed client types.
 - When adding multiple client IDs, simply add a comma between each client ID.
 - If a client ID or type is excluded, any clients with that ID or type will not be included in the synchronization, and will not be able to log into their ePetHealth Client Portal.
- All clients will be included in the synchronization if the client filtering options are left to the default ('no' to include) in a new installation.

Appointment Selections

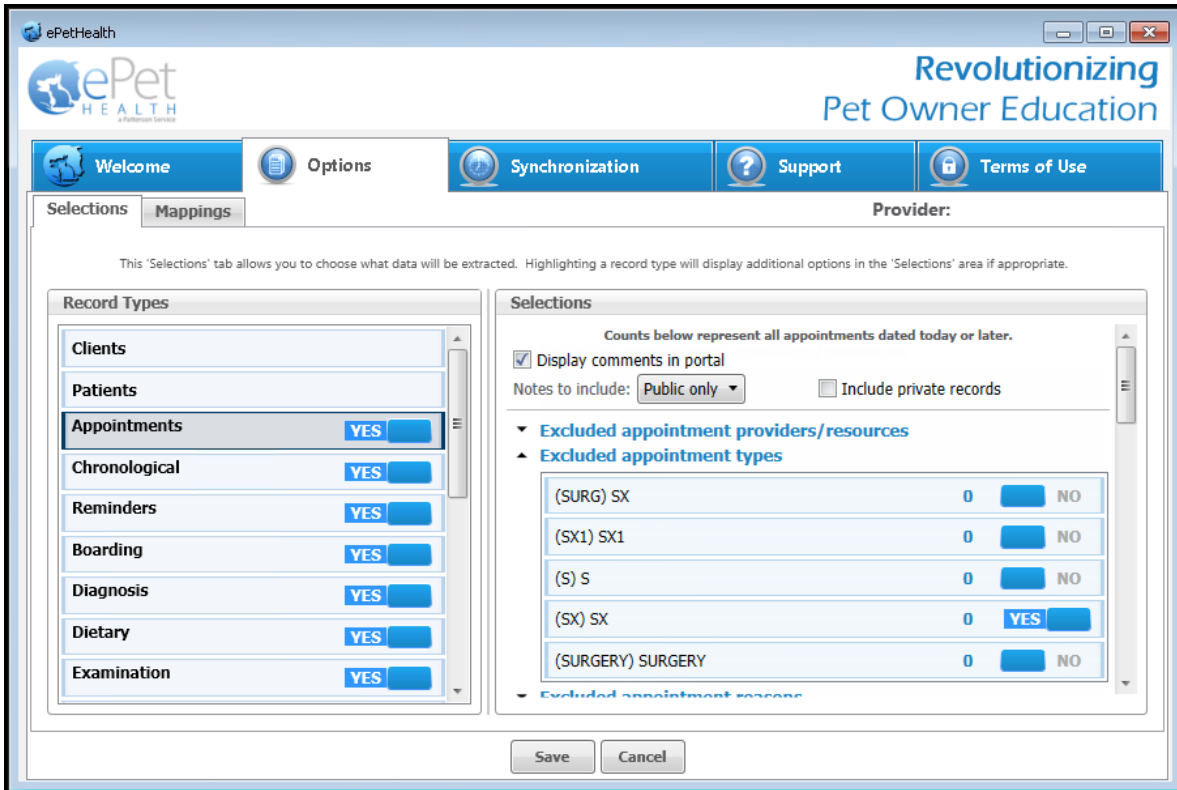

Appointments can be included or excluded based on the following criteria on a per site basis. These are all included by default in a new installation.

- a specific provider/resource
- appointment types
- appointment statuses
- appointment tracking statuses

AVImark does not support appointment reasons.

Note: Older versions of AVImark will not have the option to select an appointment type.

- All appointments with excluded criteria will not be included in the synchronization and will not be viewable in the ePetHealth Client Portal.
- All appointments will be included in the synchronization if the appointment filtering options are left to the default ('no' to include) in a new installation.
- In the Selections Table, comments (notes) may be selected to display in the Client Portal by checking the box at the top of the table. This is deselected (excluded) by default.
- **Notes to include/All:** When the 'Display comments in portal' option is selected, notes in AVImark, whether they are marked as Public or not, will displayed on the portal.
- **Notes to include/Public Only:** When the 'Display comments in portal' option is selected, notes in AVImark marked as Public will displayed on the portal.
- **Include private records:** When the 'Include private records' checkbox is selected, records marked as *private* in AVImark will be displayed on the portal.
- If the Appointment Selection is set to No, confirmation emails for appointments will not be sent to pet owners. A notification alert such as the one shown below will appear.

Appointment Confirmations

Automated appointment confirmation write back is supported for AVImark in ePetHealth, provided the Provider enables the feature in the Provider Portal | My Practice | General Settings Page and extracts appointments discussed in the previous section. Successful write back can be verified in the logs as seen below or in AVImark.

The screenshot shows the ePetHealth application window. At the top, there is a navigation bar with tabs for Welcome, Options, Synchronization, Support, and Terms of Use. Below this, there are sub-tabs for Contact Us and Diagnostics. The main content area displays service status information:

- Service status: **Running**
- Extraction status: **Idle**
- Last extraction: ---
- Last result: ---

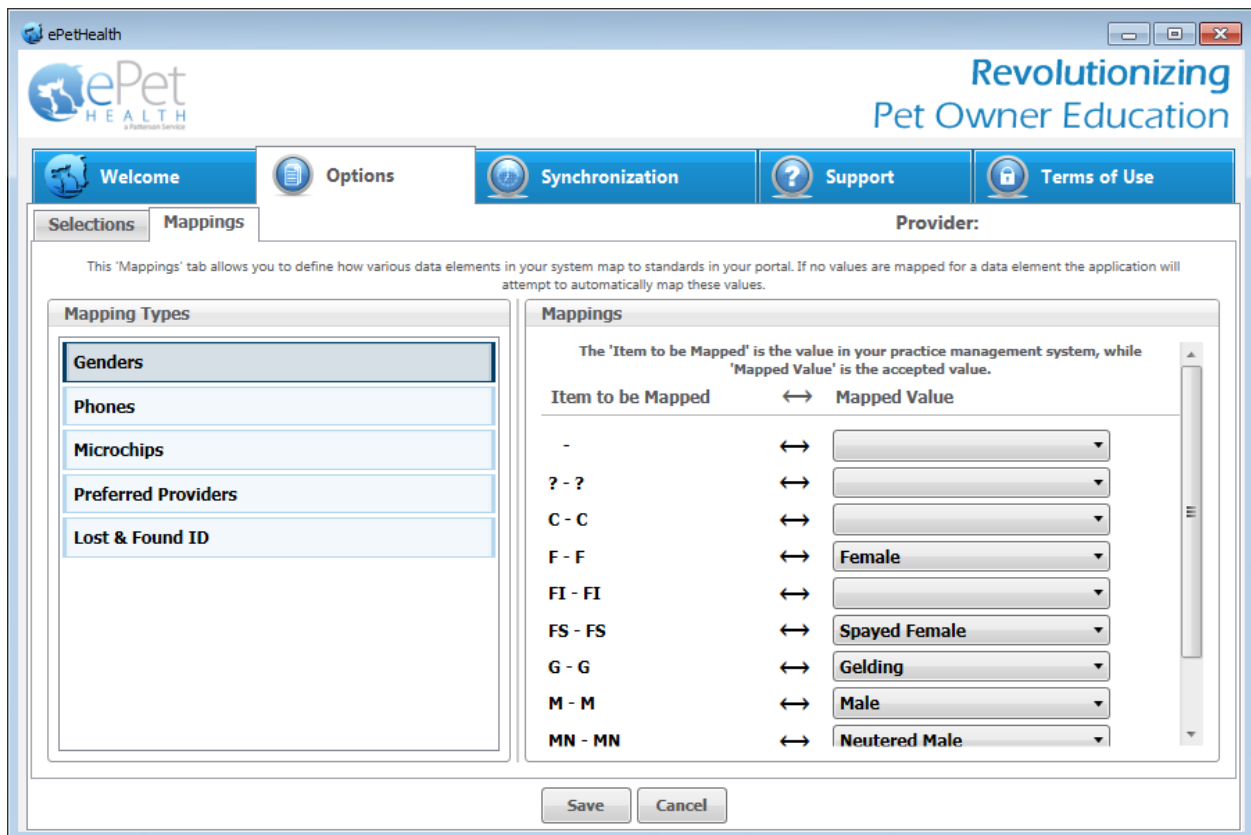

Below the status information is an "Application Logging" section with an "AutoRefresh" button set to "YES" and a "Get More Entries" button. A table displays the application logs:

ID #	Severity	Timestamp	Message

Mappings

- Mappings allow the dashboard to map fields from the Practice Management System to the ePetHealth 'mapped value', which will be shown in the Client Portal.

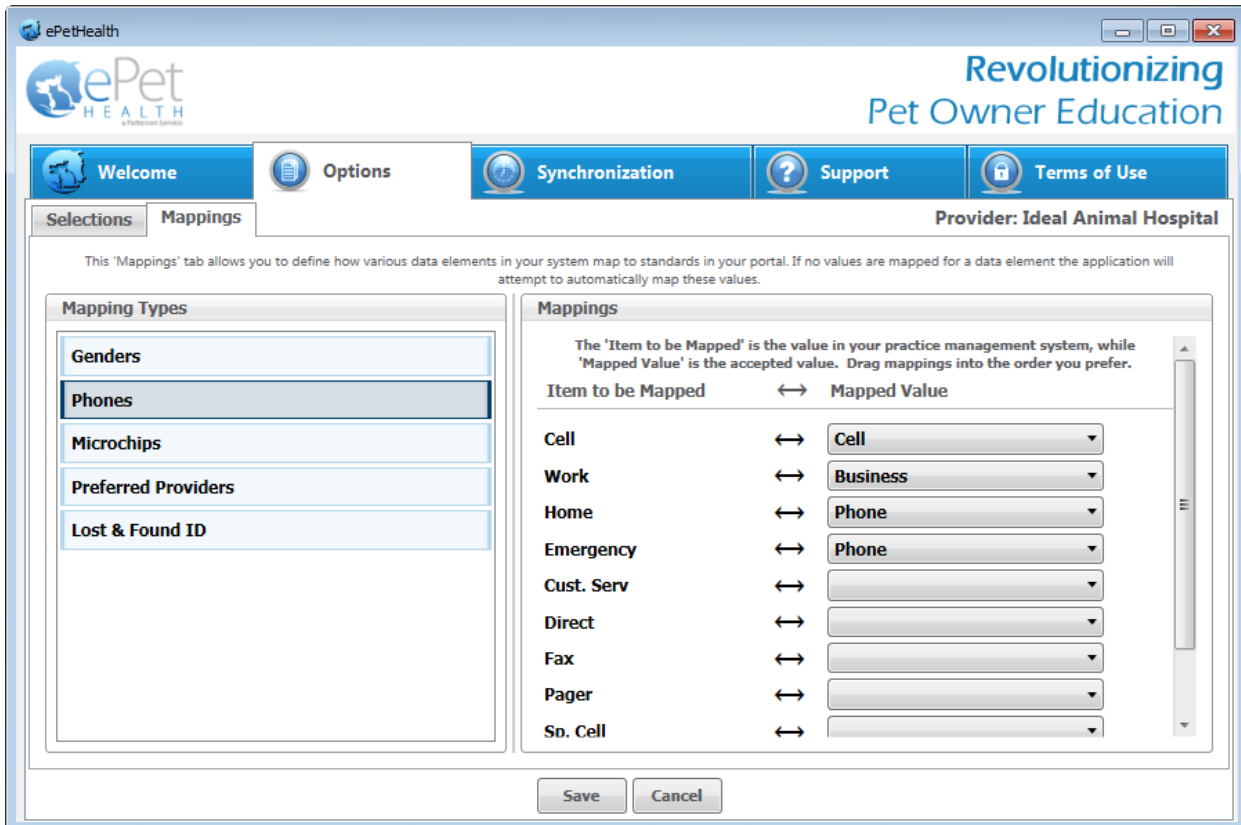

- Genders:
 - The 'Item to be Mapped' is the value in the Practice Management System.
 - The 'Mapped Value' is the accepted value.
 - Multiple genders can be mapped to the same Mapped Value.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - For example, the practice would need to designate that the M-Male gender (item to be mapped) in their Practice Management System is the same as Male in the Client Portal (mapped value).

This 'Mappings' tab allows you to define how various data elements in your system map to standards in your portal. If no values are mapped for a data element the application will attempt to automatically map these values.

Item to be Mapped	↔	Mapped Value
-	↔	
? - ?	↔	
C - C	↔	
F - F	↔	Female
FI - FI	↔	
FS - FS	↔	Spayed Female
G - G	↔	Gelding
M - M	↔	Male
MN - MN	↔	Neutered Male

- Phones:
 - The 'Item to be Mapped' is the value in the Practice Management System.
 - The 'Mapped Value' is the accepted value.
 - Multiple phones can be mapped to the same Mapped Value, but only the first phone displayed in the list will be shown for that particular client. For example, Phone and Work (Item to be Mapped) are both mapped to Phone (Mapped Value), but only Phone (Item to be Mapped) will show. Work (Item to be Mapped) will not show.
 - Phone types mapped to the same Mapped Value can be dragged and dropped in the order of priority for the extraction. In the example below, Home and Emergency are both mapped to Phone. Home takes priority over Emergency, so if Client A has both Home and Emergency in the Practice Management System, Home will be mapped to Phone in the extraction.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - For example, the practice would need to designate that the Work (Item to be Mapped) in their Practice Management System is the same as Business in the Client Portal (Mapped Value).

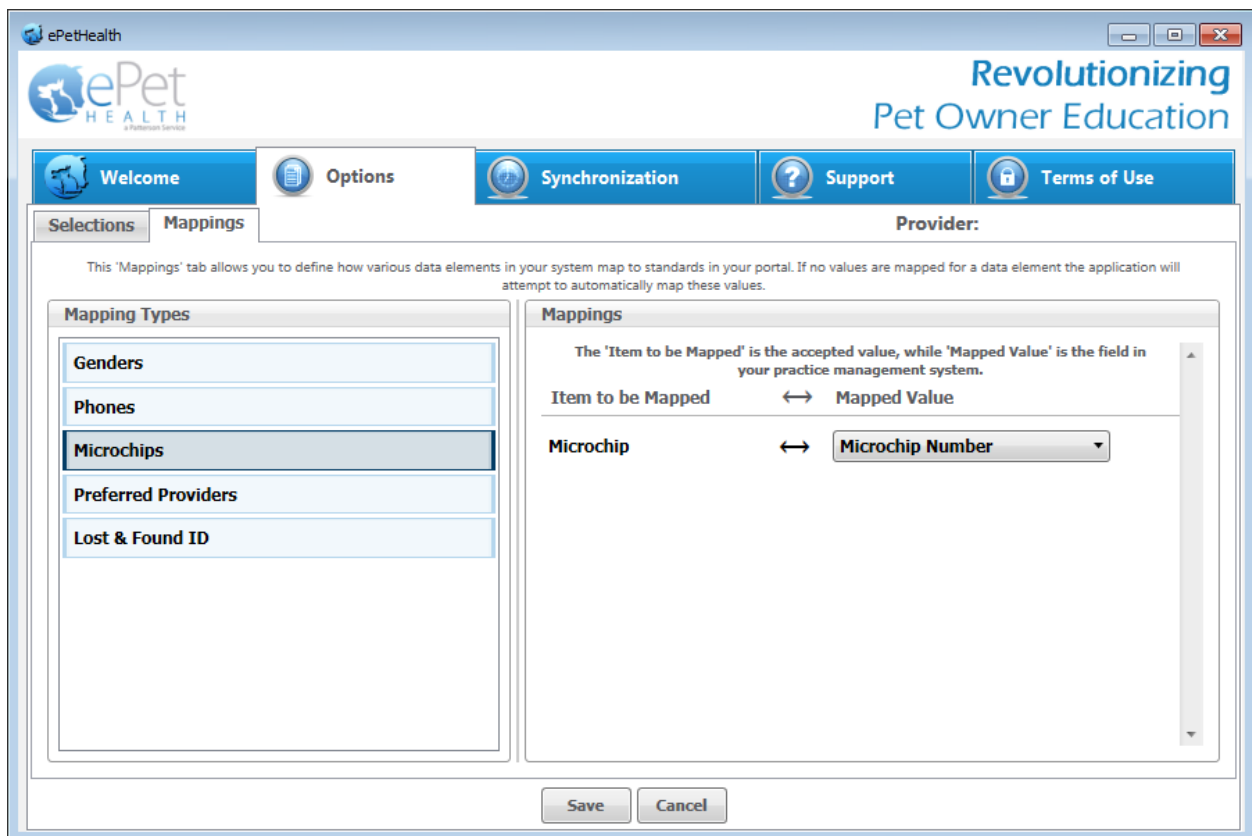

The screenshot shows the 'Mappings' configuration window in the ePetHealth application. The window title is 'ePetHealth' and the provider is 'Ideal Animal Hospital'. The 'Mappings' tab is active, showing a table where 'Item to be Mapped' values are mapped to 'Mapped Value' standards. The 'Phones' category is selected in the left sidebar. The table shows the following mappings:

Item to be Mapped	Mapped Value
Cell	Cell
Work	Business
Home	Phone
Emergency	Phone
Cust. Serv	
Direct	
Fax	
Pager	
Sp. Cell	

Buttons for 'Save' and 'Cancel' are located at the bottom of the window.

- Microchips:
 - The 'Item to be Mapped' is the accepted value.
 - The 'Mapped Value' is the value in the Practice Management System.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - For example, the practice would need to designate that the Microchip (Item to be Mapped) that will display in the Client Portal is the same as Microchip Number (Mapped Value) in their Practice Management System.

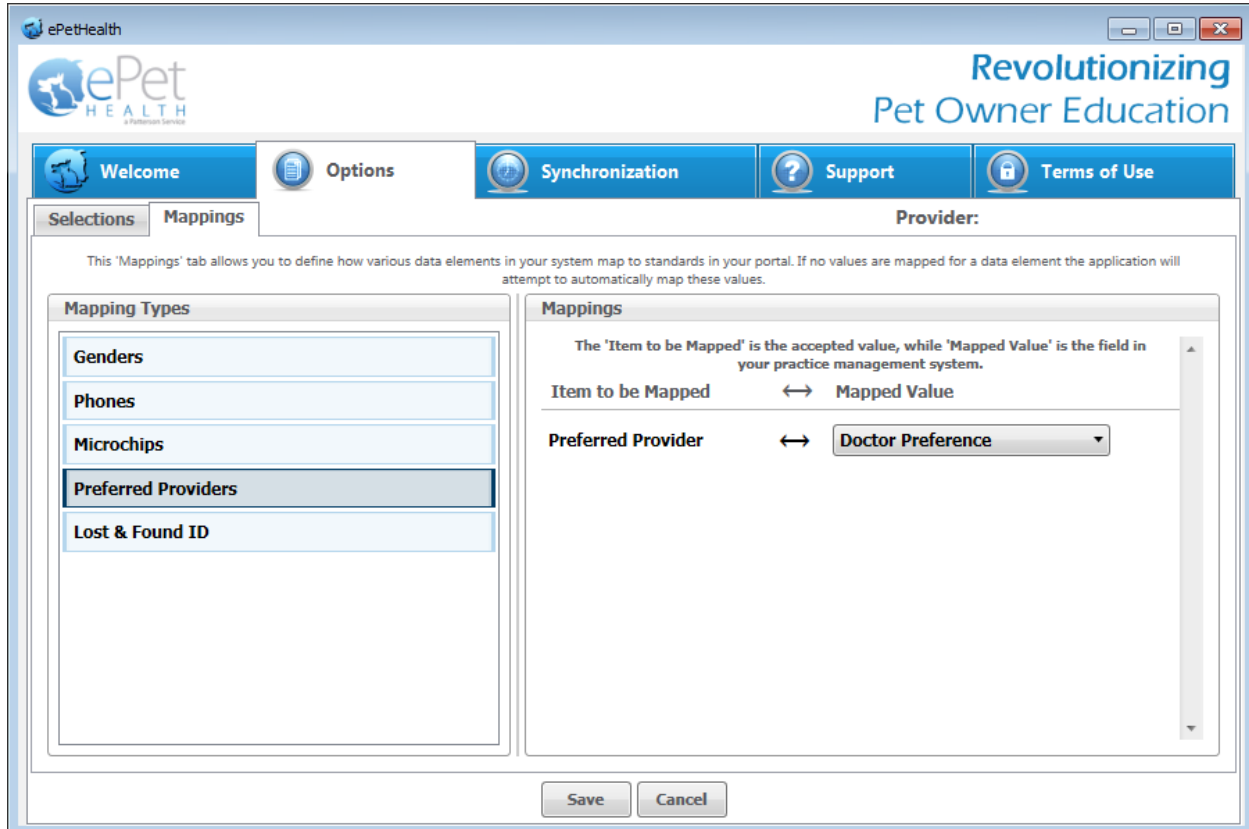

The screenshot shows the 'ePetHealth' application window with the 'Mappings' tab selected. The window title is 'ePetHealth' and the header includes the ePetHealth logo and the slogan 'Revolutionizing Pet Owner Education'. The navigation bar contains 'Welcome', 'Options', 'Synchronization', 'Support', and 'Terms of Use'. The 'Mappings' tab is active, and the 'Provider:' field is empty. A descriptive text states: 'This 'Mappings' tab allows you to define how various data elements in your system map to standards in your portal. If no values are mapped for a data element the application will attempt to automatically map these values.'

On the left, the 'Mapping Types' list includes: Genders, Phones, **Microchips** (highlighted), Preferred Providers, and Lost & Found ID. The main 'Mappings' area contains the following configuration:

Item to be Mapped	↔	Mapped Value
Microchip	↔	Microchip Number

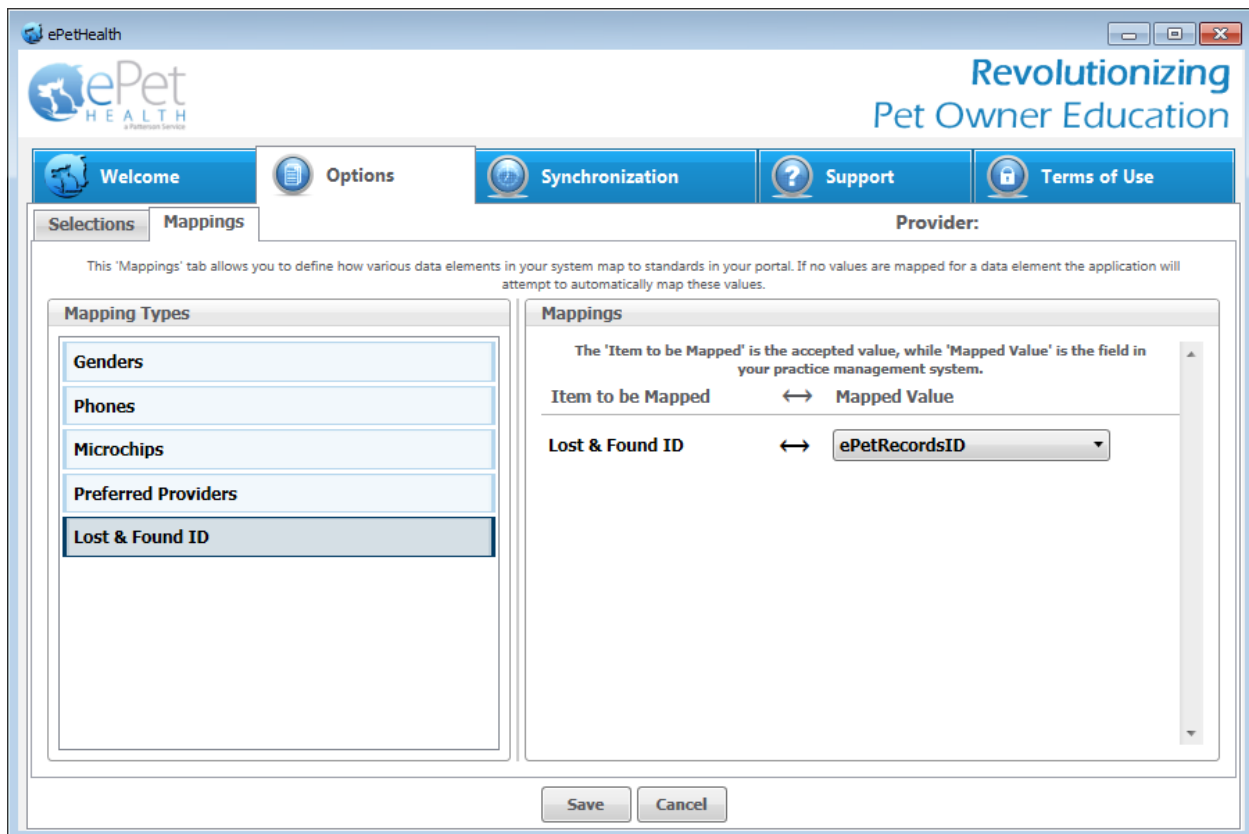

At the bottom of the window are 'Save' and 'Cancel' buttons.

- Preferred Provider:
 - The 'Item to be Mapped' is the accepted value.
 - The 'Mapped Value' is the value in the Practice Management System.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - This mapping allows the dashboard to pull the correct Practice Management field for the Preferred Provider of the client in the ePetHealth Client Portal.
 - For example, the practice would need to designate that the Preferred Provider (Item to be Mapped) that will display in the Client Portal is the same as Doctor Preference (Mapped Value) in their Practice Management System.

The screenshot shows the ePetHealth application window with the 'Mappings' tab selected. The window title is 'ePetHealth' and the header includes the ePet Health logo and the slogan 'Revolutionizing Pet Owner Education'. The navigation bar contains 'Welcome', 'Options', 'Synchronization', 'Support', and 'Terms of Use'. The 'Mappings' tab is active, and the 'Provider:' dropdown is set to 'Doctor Preference'. A descriptive text states: 'This 'Mappings' tab allows you to define how various data elements in your system map to standards in your portal. If no values are mapped for a data element the application will attempt to automatically map these values.' On the left, a 'Mapping Types' list includes 'Genders', 'Phones', 'Microchips', 'Preferred Providers' (highlighted), and 'Lost & Found ID'. The main 'Mappings' area shows a table with two columns: 'Item to be Mapped' and 'Mapped Value'. A bidirectional arrow connects the two columns. The 'Preferred Provider' row is populated with 'Doctor Preference' in the 'Mapped Value' column. At the bottom, there are 'Save' and 'Cancel' buttons.

- Lost & Found IDs:
 - The 'Item to be Mapped' is the accepted value.
 - The 'Mapped Value' is the value in the Practice Management System.
 - Mapped Values can be left blank if the corresponding Item to be Mapped is not to be shown in the Client Portal.
 - This mapping allows the dashboard to pull the correct Practice Management System field for the Lost & Found ID field in the ePetHealth Client Portal. This field is designed to work with ePetHealth's Lost & Found ID tags, which are searchable through our website: <http://www.epethealth.com>

The screenshot shows the ePetHealth web application interface. At the top, there is a navigation bar with tabs for Welcome, Options, Synchronization, Support, and Terms of Use. Below this, there are tabs for Selections and Mappings. The Mappings tab is active, and the Provider is set to 'Provider:'. A descriptive text states: "This 'Mappings' tab allows you to define how various data elements in your system map to standards in your portal. If no values are mapped for a data element the application will attempt to automatically map these values." On the left, a list of Mapping Types includes Genders, Phones, Microchips, Preferred Providers, and Lost & Found ID. The Lost & Found ID type is selected. The Mappings table shows a mapping for 'Lost & Found ID' to 'ePetRecordsID'. The table has columns for 'Item to be Mapped' and 'Mapped Value'. At the bottom, there are Save and Cancel buttons.

Item to be Mapped	Mapped Value
Lost & Found ID	ePetRecordsID

Synchronization

Synchronizations will pull data from the past six months, one year, two years or three years, depending on what option is selected in the Extraction Time Frame menu under the Options tab.

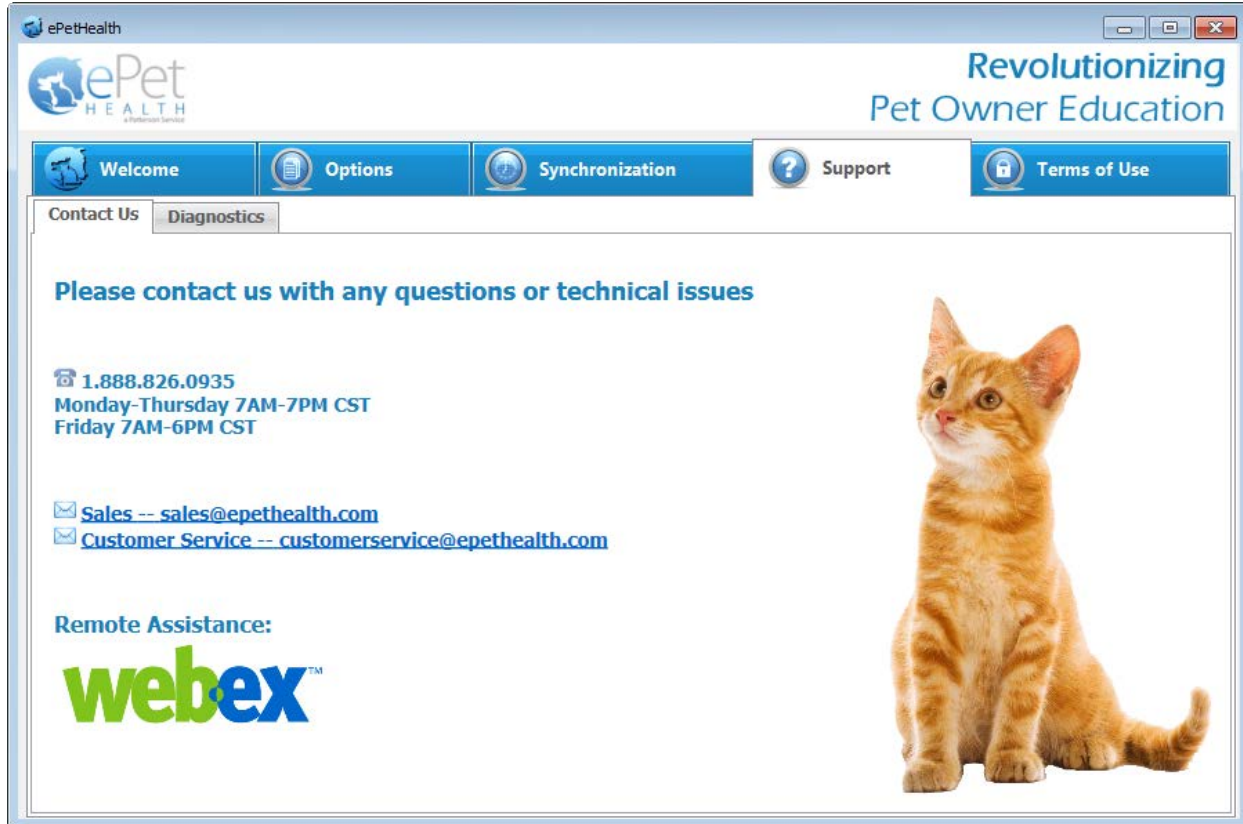

NOTICE: The Server must remain **turned ON** during the selected days/time to allow your practice's data to upload to ePetHealth. If the dashboard is installed on a workstation, both the workstation and the server computer must remain on.

ePetHealth recommends that the synchronization schedule be set to sync immediately after the practice closes each day, on days that the practice is open.

It is also possible to run a manual synchronization from this screen.

Support | Contact Us

The screenshot shows a web browser window titled "ePetHealth". The page header includes the ePet Health logo and the slogan "Revolutionizing Pet Owner Education". A navigation bar contains buttons for "Welcome", "Options", "Synchronization", "Support", and "Terms of Use". The "Contact Us" page is active, displaying the following information:

- Contact Us** | Diagnostics
